

Joint Release

Strategic alliance to deliver enhanced services and tools for the HP 3000 environment.

Cupertino, CA—November 16, 2005—IMAXSOFT Corporation (USA), a leading systems migration expert and key migration tools provider for the HP 3000 environment, and SoftSol Resources Inc., a global leader in Enterprise Technology Modernization and Innovation (ETMI), entered into a strategic partnership to deliver performance-driven tools and professional services in a synergistic approach to HP 3000 clients.

IMAXSOFT and SoftSol have analyzed their core capabilities and have found complimentary areas of expertise which, when combined, will benefit HP 3000 users that wish to migrate from their existing platform. IMAXSOFT and SoftSol will share their best practices, proven methodologies and robust tools to enhance migration services to clients. Building on the existing migration momentum driven by the discontinued support of the HP 3000 line in year-end 2006, this strategic alliance underscores the increased importance of the need to maximize ROI for IT and to increase systems flexibility to meet demands of evolving technologies trends and competitive procurement.

This partnership combines IMAXSOFT's extensive migration knowledge of legacy systems and the unparalleled automation and accuracy of the OPENTURBO toolset along with SoftSol's software engineering solutions. IMAXSOFT will provide consultation services as well as its suite of migration tools in joint engagements with SoftSol. Additionally, SoftSol will use its track record and abilities to market to its clients including United States Government and large corporations in Europe.

"We have noticed that HP 3000 clients are now looking for world-class solutions with a great value proposition for their Enterprise Modernization Solutions. SoftSol and IMAXSOFT partnership provides a unique combination of world-class industry recognized and highly efficient automated migration tools, proprietary methodologies, experienced staff and offshore delivery model wherever applicable. This is a unique combination, which is rare to match " said Kris Yalavarthy. Our approach was simple, pick the best and most efficient proven automated tools in the HP 3000 migration space, and complement them with other equally best ingredients to deliver world-class, end-to-end solutions with a great value proposition that our clients are seeking.

About SoftSol

SoftSol, an ISO 9001:2000 Organization, is a global information technology services and solutions provider. Established in 1993, for more than 13 years, SoftSol demonstrated continued commitment to well known global clients within industry and government. SoftSol delivers Enterprise Modernization and Innovation Solutions with unique set of proprietary tools, methodologies, and specialized expertise for Legacy migrations, and modernization of Forte, Powerbuilder, Delphi as well as platform modernizations from HP 3000 and Tandem to either .Net or open systems.
