

## Enterprise security mandates unraveled by VerticoData.

Cupertino, CA—June 1, 2007—IMAXSOFT Corporation (USA), industry leader in enterprise security auditing announced the release of **VerticoData**, a complete secured auditing solution that records both *read* and *write* transactions. Combined with IMAXSOFT's proven, patent pending technology, deployed by top Fortune 1000 companies, **VerticoData** delivers several advantages: seamless integration, complete enterprise audit-trail (per SOX, GLBA, PCI DSS, SAS 70, ISO/IEC 27002, and HIPAA demands), expandability across multiple applications and layers of access, customized industry-specific sensitive data definition, utilities safeguards and less than 2% performance overhead.

With regulatory compliance measures and a multitude of government and industry mandates, a growing necessity to protect and safeguard security breaches on sensitive data becomes high priority for IT. Now, end-users and back-office computing environment will have the peace of mind delivered by **VerticoData**. IMAXSOFT's technology is transparent, therefore, requires no modification to existing applications and databases and guarantees an absolute interference-free operation. For enterprise with on-going data upgrades and high maintenance infrastructures, **VerticoData**'s flexible nature can accommodate future alternative methodologies with minimum modification.

Protect your data by learning more about **VerticoData** and the successful client-base we had served through a request for a live demo today.

### About VerticoData

Developed and driven by industry's unmet need for total enterprise security, **VerticoData** was built upon proven technologies deployed by IMAXSOFT in diverse applications. **VerticoData's** distinctive advantages coupled with multi-functional capabilities provide both active and passive security safeguards for auditing compliance through all levels.
